## CONTROL AMPLIFIER FOR EHR3 AND EHG3

### CONTROL AMPLIFIER FOR EHR3 AND EHG3

This control amplifier is constructed compactly by adopting a switching power supply and can operate with a wide range of power supplies (85 to 250 VAC (50/60 Hz) and 110 to 250 VDC).

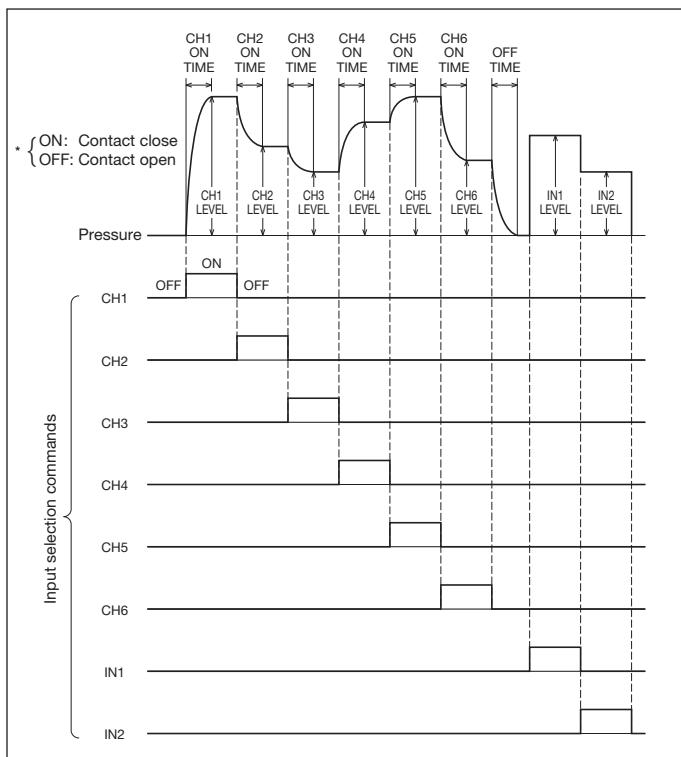

#### ■Features

- The amplifier incorporates six pressure setting units and can handle multistage pressure control on up to six channels.
- The time settings for switchover among the channels can be made independently.
- When there are multiple flow settings using one control valve, multiplestage setting and shock relief are possible without installing external setting units.
- The cord connecting the valve coil connection terminal to the valve coil should have a current capacity of 1 A or larger, and the voltage drop in the connection cord should be limited to within 2 V.
- If the SOL connection terminal is disconnected with the power on, a surge voltage is generated and it may degrade the solenoid insulation.
- Simultaneous selection of more than one channel may cause trouble. An input selection command should be used for each channel, independently.
- For the external voltage input (IN1, IN2), use a shielded cable. The shielded cable should be connected as specified: IN1 to terminal No. 10 and IN2 to terminal No. 14. (Terminal Nos. 10 and 14 are connected in the amplifier).
